

Engineering has reviewed the TRC submittal for The Pointe at Barclay Buildings 5 &6 and offers the following comments:

1. The project proposes over 10,000 square feet of newly constructed impervious. Therefore, it qualifies as a stormwater management plan. A submittal package should be sent directly to Engineering that includes: a check for \$500 for stormwater permit modification fee, revised plans, stormwater permit application (Form SWP 2.2), calculations, and digital copies for all documents included in the submittal.
2. Please note that review times are currently running at 30 to 45 days. Please factor this into your review schedule.
